MISSION APOLLO 3961
MISSION GUIDE

YOUR MISSION:

RESTORE THE LOST CONNECTION!

The François-Xavier Bagnoud Observatory urgently needs your help! For several days now, all contact with the universe has been lost, making scientific research impossible. Equip yourself with your Astral Viewer and embark on a mission to save the Observatory!

After thorough analysis, scientists have discovered the source of the problem: The Astral Markers. These small devices, scattered throughout our solar system, are responsible for receiving signals from the Cosmos. However, they are malfunctioning, leaving all telescopes and instruments blind. The markers have been deactivated, and remote reactivation is impossible.

We need you! Astro-Explorers, your mission, should you choose to accept it, is to locate and scan all the markers with your Astral Viewers. Each activated marker will bring us one step closer to restoring the signal. But be careful... Some may be damaged. Sharp observation, logical reasoning, and precise actions will be key to your success.

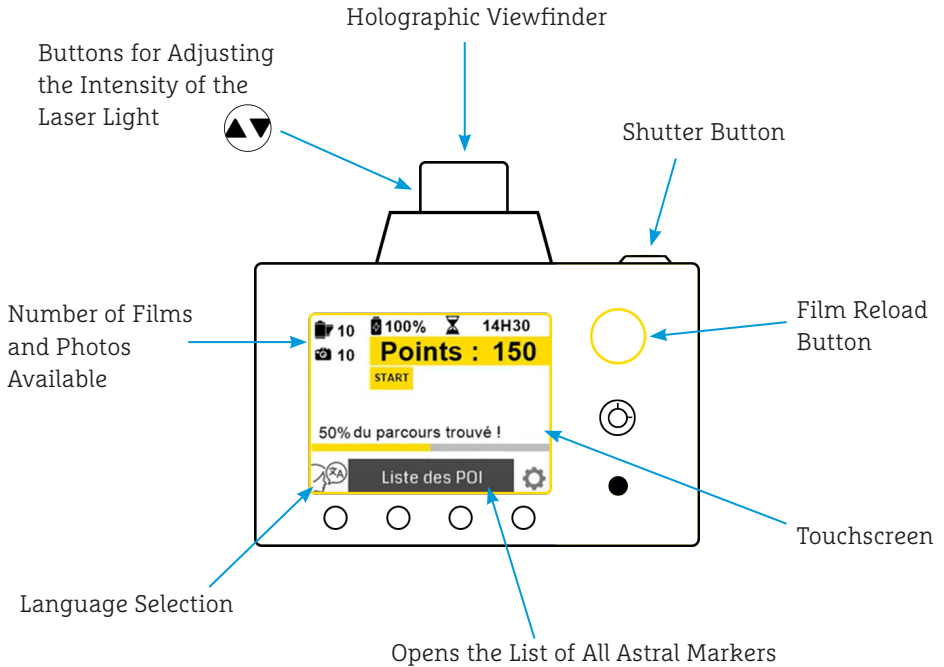

Steps to Complete the Mission:

1. **Find the scattered markers.**
Stay alert and follow the clues.
2. **Scan each marker with your Astral Viewer.**
A light and sound signal will confirm its activation.
3. **Fully restore the Observatory's connection.**
Once all markers are active, the Observatory will finally reconnect with space.

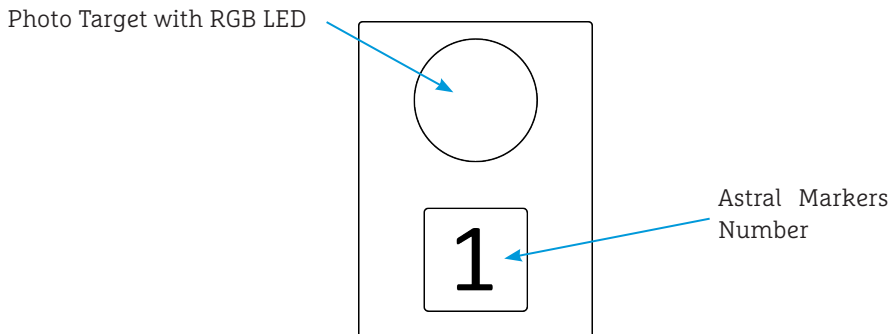

Time is running out—act fast before the disturbance becomes irreversible! Prepare your Astral Viewers and begin your mission now !

INSTRUCTION MANUAL

ASTRAL VIEWER

ASTRAL MARKERS (POI)

ASTRO-EXPLORER'S GUIDE

SET OFF ON AN ADVENTURE TO SAVE THE OFXB!

1. Press "**START**" on the touchscreen to begin the mission.
 2. Press "**POI list**" to obtain a list of all the markers to be found.
 3. Select the one you wish to search for, then press ">>>".
A QR code will now appear on the screen. Scan it to get all the information about the marker's location.
 4. Follow the clues and find it.
 5. Once you've found it, get closer, **aim the Astral Viewer's laser at the target** and **press the shutter button** to start the challenge. To help you aim, you can increase the intensity of the laser visible through the viewfinder.
 6. The marker's target will then flash green and red lights. **Aim at the target** and **press the shutter button** when the **light is green**. Be careful, you'll lose points if you shoot a red light!
 7. The challenge ends when the marker no longer lights up. A question will then appear on the screen. **Answer by using the touchscreen**.
 8. Find the other markers and take on the challenges for each one.
 9. After answering the question for the last marker, the game will end automatically. **A QR code** will be generated. **Scan it** and **enter your contact details** to participate in the online ranking.
- ⚠ Don't forget to check **the number of photos available**. If it is at **zero**, you need to reload the film by **pressing the reload button**.
